AEC – FAD Program & Solution Roadmap

Document Purpose & Structure

The purpose of this document is to set out the high-level approach, sequence of activities and timeline for the delivery of the key capabilities to enable FAD program outcomes. This proposed roadmap has been layered into three levels to provide relevant detail and information depending on the nature of the audience. During the mobilisation phase, we will work with AEC and its stakeholders to validate and refine this roadmap to best align with the organisation expectations and delivery outcomes to-date.

Level	Purpose	Sample Visual
Level 1 – Executive Roadmap	To provide a Senior Executive view of the key streams of delivery and their timing. This view would typically be used at key senor level governance forums and showcases to track and monitor progress of delivery.	s 47E(d)
Level 2 – Program Roadmap	To provide the DMO and the delivery MDTs a view of key sub-streams of work, activities and inter-dependencies (at a high level) across streams of work. This view would typically be used by the DMO to track and monitor delivery of the FAD program by having a clear view of parallel streams of work across multiple moving parts of the program	s 47(1), s 47E(d)
Level 3 – Solution Roadmap	To provide the DMO and the delivery MDTs a more granular view of each of the solution components and timing of each of the delivery phases across the agile delivery framework. This view would typically be used by the DMO and the MDTs to track the technical delivery of specific solution components to be able to manage any dependencies and implications on other related technical component delivery. The current roadmap is based on the high-level MDT roadmap provided in the procurement documents and will be iterated post program discovery.	

Level 1 – Executive Roadmap

Level 2 – Program Roadmap

s 47(1), s 47E(d)
